

# All for her. All for the baby. NEXUS further expands its leading position in women's health

**NEXUS is strengthening its market-leading position in prenatal diagnostics and reproductive medicine through strategic investments in two innovative specialist providers.**

NEXUS is a leading provider of digital solutions in **pregnancy, childbirth, and women's health**. Through **NEXUS / ASTRAIA**, we empower gynaecologists and midwives to deliver high-quality care throughout the entire course of pregnancy — from initial screenings and evidence-based risk assessments to comprehensive birth documentation. Our modular solution combines medical precision with intuitive usability and a clearly structured interface, supporting holistic care every step of the way. This unique approach is trusted and actively used by more than **2,400 clinics and practices in over 70 countries**, making NEXUS / ASTRAIA a valued partner in modern women's healthcare.

With the acquisition of **CRITEX GmbH**, the global leader in **IVF software**, we are extending our portfolio to cover the entire spectrum of **reproductive medicine**. The advanced **MedITEX** product line, already in use at more than **500 facilities across 54 countries**, enables clinics and specialists around the world to deliver seamless, software-supported care to couples on their path to parenthood — from the first consultation to a successful pregnancy.

By bringing together IVF and prenatal care within a single, integrated ecosystem, we are closing critical gaps in the care journey, thus enabling a more connected and patient-focused experience that supports families every step of the way.

We are also strengthening our capabilities in **obstetrics** through our investment in **ICT HCTS**, a Dutch company specializing in modern **CTG monitoring and telemonitoring** — a rapidly growing field with tremendous potential. With 40 years of experience, over **150 hospital installations in 10 countries**, and a skilled international team, ICT HCTS ideally complements our portfolio and brings valuable expertise to the NEXUS Group.

**Our vision is clear:** to provide seamless, digital support for women's health — from general gynaecological care to the journey of becoming a parent — worldwide. With intelligent software that simplifies medical processes, supports sound decision-making and builds trust, we are shaping the future of care for women at every stage of life.

## About NEXUS

NEXUS AG develops and delivers cutting-edge software solutions for the global healthcare market. With our clinical information system (NEXUS / HIS) and a comprehensive suite of integrated diagnostic modules, we offer one of the most extensive and interoperable product portfolios available — capable of meeting virtually all functional requirements across hospitals, psychiatric clinics, rehabilitation centers, and diagnostic institutions, all within our own product families.

Today, NEXUS employs around 2,000 people, operates through dedicated offices in ten European countries, and supports customers in over 32 additional markets through certified partners. Driven by steadily increasing demand, we have built a robust and expanding customer base in recent years, consistently achieving strong growth in both revenue and earnings.

## About CRITEX

CRITEX GmbH, headquartered in Regensburg, Germany, has been developing specialized software solutions for reproductive medicine since 2000 — most notably MedITEX IVF, a well-established platform for electronic documentation and quality assurance in in-vitro fertilization (IVF). The system supports the complete clinical and laboratory workflow, including patient history, treatment planning, lab coordination, and legally compliant data management. Its modular architecture allows for flexible extensions, such as MedITEX Survey, which enables patients to submit forms digitally — improving data collection and patient engagement. In addition, CRITEX offers customized interfaces to seamlessly connect medical devices and hospital information systems, ensuring smooth integration into existing infrastructures. Its client base ranges from IVF centers across Germany to leading international clinics, underscoring the platform's scalability and global relevance.

## About ICT HCTS

ICT HCTS (Healthcare Technology Solutions) specializes in software solutions that are designed for electronic registration and fetal monitoring aimed at optimizing work and decision-making processes in the maternity department. The company develops MososCTG for the central monitoring of CTG data, integrating into existing hospital (EMR) systems and enabling paperless working on maternity wards. ICT HCTS also offers telemonitoring which is an all-in-one solution for implementing patient-capture remote CTG's. The portfolio includes the MososNXT CTG system and the Stan S41 CTG device monitor, which includes advanced functions such as ST Analyses. The aim is to make the care of mother and child more efficient and safer through networked, standardized, and user-friendly IT systems.
